SOFTWARE REQUIREMENT SPECIFICATION (SRS)  
FOR SECURITY INCIDENT MAPPING (SIM) SYSTEM

## 1. INTRODUCTION

The Security Incident Mapping (SIM) system is a web-based platform designed to allow students, staff, and landlords to report and monitor security incidents within the campus environment. The system aims to reduce crime rates by enabling quick reporting and response.

## 2. OBJECTIVES

- To provide a platform for reporting crimes
- To improve campus security awareness
- To assist authorities in responding quickly

## 3. SYSTEM DESCRIPTION

SIM is a simple web application that allows users to report incidents such as theft, assault, and other crimes. Reports can be submitted anonymously to encourage participation.

## 4. USERS OF THE SYSTEM

- Students
- Staff
- Landlords
- Administrators

## 5. FUNCTIONAL REQUIREMENTS

- Users can submit incident reports
- Users can choose anonymous reporting
- System stores reported incidents
- Admin can view all reports
- System displays crime locations

## 6. NON-FUNCTIONAL REQUIREMENTS

- System must be user-friendly
- Fast response time
- Secure handling of user data
- High availability

## 7. SYSTEM INTERACTIONS

- Users interact through web interface
- Data stored in database
- Admin monitors activities

## 8. CONCLUSION

The SIM system will help reduce crime by improving communication between users and security authorities, thereby enhancing safety on campus.
